

How to call a python file in notebook

Hi guys , I hope this read me helps you guys in the morning to run the code from colab easily.

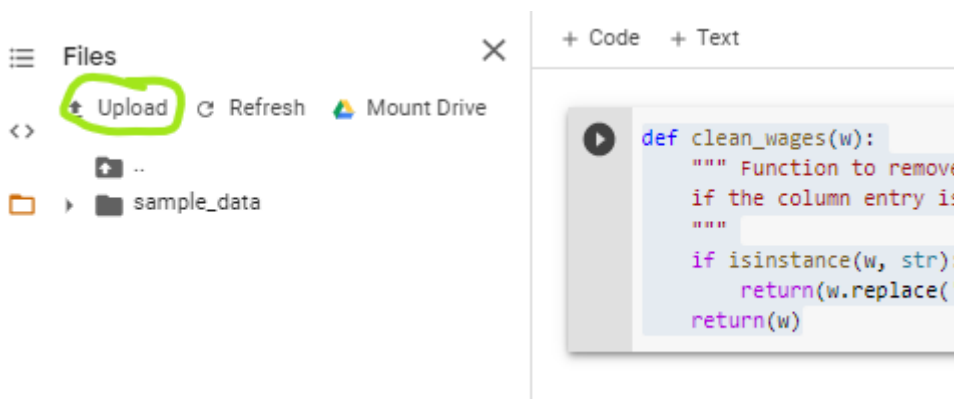

Step 1: Download the python files from Github repository.

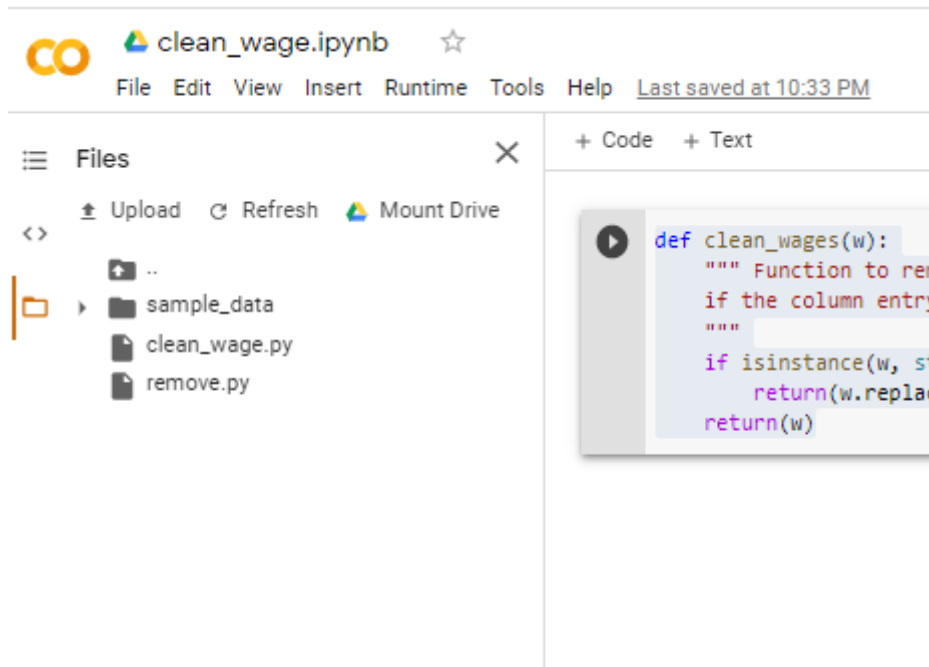

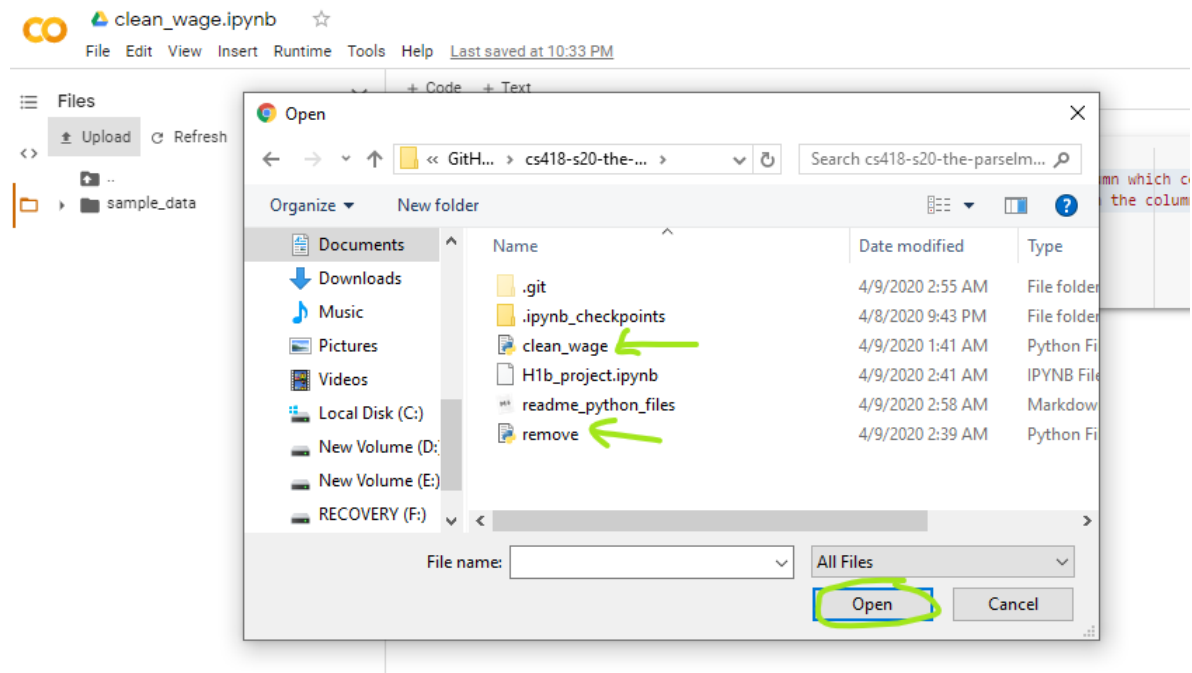

the files we need is remove.py and clean_wage.py.

Step 2: In the Colab notebook, click on the file icon.

Step 3: Click on upload and load the python files from your downloads.

Step 4: import the files (code written in the notebook)

```
import clean_wage as cw  
import remove as rm
```
